Water

## AL-280

## Features

1. Relief valve, exclusive for the pressure control of pumps with high pulsation pressure or large pressure fluctuation.
2. The trim parts (valve and valve seat) are designed to continuously discharge fluid against its set pressure change without popping (patent pending), preventing chattering and hunting.
3. Stainless steel with excellent corrosion resistance is used for the adjusting spring.

## Specifications

| Structure |  | Closed type |
| :---: | :---: | :---: |
| Application |  | Cold and hot water, Oil (heavy oil A, heavy oil B, kerosene) |
| Working pressure |  | $0.05-1.0 \mathrm{MPa}$ |
| Maximum temperature |  | $120^{\circ} \mathrm{C}$ |
| Material | Valve case | Ductile cast iron |
|  | Spring case | Ductile cast iron |
|  | Valve, valve seat | Stainless steel |
|  | Adjusting spring | Stainless steel |
| Connection |  | JIS 10K FF flanged |

## Dimensions and Weights

| (mm) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Nominal size | L | H | $\mathrm{H}_{1}$ | Weight (kg) |  |
| 15 A | 90 | 245 | 108 | 4.7 |  |
| 20 A | 90 | 245 | 108 | 5.0 |  |
| 25 A | 90 | 245 | 108 | 6.2 |  |
| 32 A | 91 | 285 | 115 | 8.6 |  |
| 40 A | 91 | 285 | 115 | 8.8 |  |
| 50 A | 105 | 331 | 132 | 13.0 |  |

Relief Valve Discharge Piping

## Table for Selecting Nominal Sizes

## OFlow rate chart

The flow rate to each nominal size when the accumulation (overpressure to the set pressure) is $25 \%$ is as shown in Fig. 1 . See Fig. 2 when the accumulation is less than $25 \%$.

Fig. 1: Nominal size selection chart

## [Example]

To select a nominal size when the working conditions are pressure: 0.3 MPa and discharge capacity: $1.0 \mathrm{~m}^{3} / \mathrm{h}$, first find intersection point A of the pressure of 0.3 MPa on the horizontal axis and the discharge capacity of $1.0 \mathrm{~m}^{3} / \mathrm{h}$ on the vertical axis in Fig. 1. Since intersection point A lies between the curve of nominal sizes $15 \mathrm{~A} \cdot 25 \mathrm{~A}$ and the curve of nominal size 25 A , select the larger one, 25A.

When the accumulation is less than $25 \%$, select an approximate flow rate magnification matching the accumulation based on this chart, and multiply the flow rate at $25 \%$ accumulation by the selected magnification.

Fig. 2: Approximate flow rate magnification

## [Example]

To obtain the flow rate when the working conditions are nominal size: 25 A , setting pressure: 0.1 MPa , and accumulation: $20 \%$, first find the flow rate at an accumulation of $25 \%$ in Fig. 1. Then, mark intersection point B of the accumulation of $20 \%$ and the diagonal straight line in Fig. 2. Trace horizontally to the left from this intersection point $B$, and reach the point of 0.8 on the axis of approximate flow rate magnification.

Discharge capacity (reference) (accumulation: 25\%)

| Nominal size | Flow area ( $\mathrm{mm}^{2}$ ) | Opening pressure (MPa) |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 0.05 | 0.1 | 0.2 | 0.3 | 0.4 | 0.5 | 0.6 | 0.7 | 0.8 | 0.9 | 1.0 |
| 15A•20A | 16.7 | 0.20 | 0.29 | 0.41 | 0.51 | 0.59 | 0.66 | 0.72 | 0.78 | 0.83 | 0.88 | 0.93 |
| 25A | 36.2 | 0.49 | 0.69 | 0.98 | 1.20 | 1.38 | 1.54 | 1.69 | 1.83 | 1.96 | 2.07 | 2.19 |
| 32A | 91.9 | 1.14 | 1.62 | 2.29 | 2.81 | 3.24 | 3.63 | 3.97 | 4.29 | 4.59 | 4.87 | 5.13 |
| 40A | 143.6 | 1.79 | 2.53 | 3.58 | 4.39 | 5.07 | 5.67 | 6.21 | 6.71 | 7.17 | 7.61 | 8.02 |
| 50A | 224.3 | 2.80 | 3.96 | 5.60 | 6.86 | 7.92 | 8.86 | 9.71 | 10.49 | 11.21 | 11.89 | 12.53 |
